

**4 Courses**

- Blockchain Basics
- Smart Contracts
- Decentralized Applications (Dapps)
- Blockchain Platforms

12/14/2018

## Alexander Sommer

has successfully completed the online, non-credit Specialization

# Blockchain

Through this specialization, learners developed an understanding of foundational concepts that enable a blockchain protocol. The courses covered applying the concepts of encryption, hashing, consensus, transactions, blocks and private-public keys in building a blockchain. Learners designed, developed and tested smart contracts and decentralized applications on a private Ethereum blockchain. The discussions included the architecture of a decentralized application stack, best practices, emerging standards, and many open issues such as scalability and privacy. Learning concluded with a holistic view of the landscape, including decentralized application use cases and other blockchain platforms.

Bina Ramamurthy Timothy Leyh

Bina Ramamurthy,
Teaching Professor of
the University at Buffalo
Computer Science and
Engineering Department

Timothy Leyh, Executive
Director of the University
at Buffalo Center for
Industrial Effectiveness
